DimcoGray Launches Modernization Plan

Company Invests In The Future

Centerville, Ohio, USA, August 18, 2009: DimcoGray Corporation, a leading designer and manufacturer of standard and custom-molded plastic knobs and handles and specialty timers is launching a modernization plan for its' Centerville plant.

The Company is investing in the latest technology for both plastics and metal processing. A new CNC lathe coupled with a fully automatic bar feeder will provide greater flexibility in the production of short run and custom orders. The Company is stepping up efforts to conserve energy by installing a new 150 ton Toyo ET-150HR2 all electric rotary injection press. The new press requires considerably less energy to operate than the two older injections presses it replaced. The Toyo press provides advanced controls to automate production and maintain the tight tolerances required for medical and other precision molding.

Dimco Gray has been in business for more than 85 years. "Though the current economic environment is challenging," President & CEO Mike Sieron assures, "we are confident that these investments will help keep our company strong and vibrant for another 85 years by enabling us to continue to provide superior products to our growing customer base while conserving energy at the same time."

DimcoGray is an industry leader in the design and manufacture of molded plastic knobs and handles for a wide variety of OEM markets. The Company provides superior value solutions for businesses with plastic fastener and control requirements. DimcoGray is ISO 9001:2000 registered. DimcoGray has its headquarters in Centerville, Ohio, USA. The Company is employee owned.
